Web Development Immersive

Oct 2016 - Jan 2017

Implementing real world technologies into a portfolio of projects.

Participating hands on with *methodically* figuring out bugs in programs, & how to work in a group in order to meet expectations for applications requiring Create, Read, Update, & Destroy functionalities.

Worked in with a group learning how to combine efforts & manage time together in order with access to a group of advisors in order to create a *survey* application where users could vote with tallied answers, using HTML, CSS, JavaScript, Handlebars, Express & MongoDB.

Capstone Project for this program including harnessing Ember as a front-end framework, which relies heavily on handlebars. Harnessed bootstrap for styling & formatting, & Ruby on Rails which talked to SQL as a database. It is all for a *blog* where you sign in to effortlessly make blog posts where others can look through and peruse them.

Sheds of Waterford

Waterford PA

Web Designer

Aug 2016 - Present

Design website for company with HTML, CSS, & JavaScript.

Accomplishments include working with different front-end programming languages to get this project off the ground. Purchased domain, used FTP & hosting to put website online. Utilized *Bootstrap* as a framework in building this site.
